#### **Rationale:**

Many people throughout the world use laptops, microcomputers, smart phones, digital assistant devices etc. All of these devices utilize a key component: a microprocessor. Microprocessor is brain of all these systems. 8086 is a 16-bit microprocessor. It is the base of all upward developed processors. It is more powerful and efficient computing machine. It overcomes all major limitations of the previous processors. It is able to get interfaced with 8-bit, 16-bit systems. This course covers architecture, signal descriptions and functioning of the 8086 microprocessor. It covers interfacing of memories and input-output devices with microprocessor. It also covers assembly language programming and at the end student will learn to design various microprocessor based systems. This will act as base for the advanced assembly language programming for next generation microprocessors.

| CO1 | Explain architecture and signal description of 8086.   |
|-----|--|
| CO2 | Describe the instructions and interrupts of 8086   |
| CO3 | Develop assembly language programs for 8086.   |
| CO4 | Draw timing diagrams for various instructions  |
| CO5 | Interface various memories and I/O devices to 8086 with assembly language programs for interfacing |

#### **Course Outcomes:** Student should be able to

#### **Rationale:**

After having sufficient command on structured and object oriented programming in C and C++, Computer Engineering students must learn programming in Java Programming language. Although Java language was developed two decades back, it occupies maximum share of technology in the market due to its continuous and adaptive evolution in the form of versions. Students should make the use of latest features in it such as Web and Mobile Application Development, for better quality of software. In this course, emphasis is given on latest and stable features of Java such as Interfaces, Generics, Lambdas, Collections Framework, Exception Handling, File Handling, I/O, Javadocs, etc. This course is based on the features of Java 8 and above.

#### Course Outcomes: Student should be able to WEDGE

| CO1 | Develop programmes using basic data types, flow control and arrays in Java |
|-----|--|
| CO2 | Understand Java classes, interfaces and packages                           |
| CO3 | Use Generics and Lambda Expressions  |
| CO4 | Develop high quality software using Collections Framework and Stream API   |
| CO5 | Handle Exceptions, Files and I/O   |
| CO6 | Develop Javadocs for their software  |

#### **Course Content Details:**

#### **Rationale:**

Python is interpreted, high level programming language. It supports multiple programming paradigms. Python uses dynamic typing and a combination of reference counting and a cycle-detecting garbage collector for memory management. Python is the leading language of many data scientists. Due to its power and simplicity, Python has become the scripting language of choice for many large organizations, including Google.

#### Course Outcomes: Student should be able to

| CO1 | Install & understand the working of IDE.                   |
|-----|--|
| CO2 | Understand various operators, looping in Python.           |
| CO3 | Develop functions & apply them in Python.                  |
| CO4 | Performvarious operations in data structures using Python. |
| CO5 | Perform File Handling operations.                          |

**Rationale:** In today's age of Technology many applications send information from one place to another place. Computer network organizes this information in such a way that it can be sent anywhere over wide geographical area and output remote information at a push of button. This indicates the type of networks used. Here we study basic concept of networking, its applications, topologies, network devices, protocol used, OSI reference model, TCP/IP model, IP addressing and various types of the communication protocols.

# Course Outcomes: Student should be able to

| CO1 | Classify types of Computer Networks.                             |
|-----|--|
| CO2 | Classify different transmission medias and switching techniques. |
| CO3 | Identify network devices and describe their functions.           |
| CO4 | Compare and explain OSI reference and TCP/IP models              |
| CO5 | Explain functions of various protocols in TCP/IP model.          |
| CO6 | Configure Wired and Wireless LAN.                                |

|            | Basics of Computer Network  |
|            | 1.1 Introduction to Computer Network: Definition of Computer network, sharing information, sharing resources, file sharing.   |
| 1          | <ul> <li>1.2 Categories of Network: Based on scope - LAN, MAN, WAN .Based on Connection - Peer to Peer network, Client- Server Network, Centralized network, Distributed network.</li> <li>1.3 Network Architecture:-Features and Applications</li> <li>1.4 Applications and Benefits of Computer Network.</li> <li>Course Outcome: CO1Teaching Hours :06 hrs Marks:08(R- 2, U-4, A-2)</li> </ul> |
|            | Transmission Media and Switching  |
|            | 2.1 Communication Media : Guided Transmission Media :Twisted pair cable,Coaxial cable,Fibre   |
| 2          | optic cable.2.2 Unguided Transmission Media : Radio waves, Microwaves, Infrared, Satellite.   |
|            | 2.3 Line-of-Sight Transmission : Point to point ,Broadcast.   |
|            | 2.4 Multiplexing: Frequency Division Multiplexing, Time division Multiplexing.  |

|   | 2.5 Switching : Circuit Switched networks, Packet Switched Networks.   |  |  |  |  |  |  |  |

**Rationale:**Database management system creates, stores, manages a large amount of data which can be used by different software application. In comparison to file processing systems, use of this system increases efficiency of business operations and reduces overall costs. For Developing and managing efficient and effective database applicationsit requires understanding the fundamentals of database management systems, techniques for the design of databases, and principles of database administration. The course focuses on the fundamentals of database management systems and the recent developments.

# Course Outcomes:Student should be able to

| CO1 | Describe fundamental concepts of database.  |
|-----|---|
| CO2 | Create, manage Database using SQL commands, Apply different constraints on database |
| CO3 | Develop databases using Entity Relationship modelling approach.                     |
| CO4 | Apply data normalization and techniques on database                                 |
| CO5 | Maintain transaction processing in Database System.                                 |
| CO6 | Write PL/SQL code for database, create functions and procedures, apply triggers on  |
|     | database .  |

|   | Relational Data Model  |
|---|--|
|   | 2.1 .Basic Concepts of Relational Model- Domain, Attributes, Tuples and Relations          |
|   | 2.2 2.2Codd's rules of RDBMS   |
|   | 2.3 Structured Query Language: Data types in SQL ,DDL, DML ,TCL,DCL.                       |
|   | 2.4 Clauses in SQL: Where, Having ,Group by, Order by clauses                              |
|   | 2.5 Functions in SQL: Date functions, Time functions, String functions, Aggregate          |
|   | functions  |
|   | 2.6 Concept of Nested Query  |
|   | 2.7 Concept of Join: Equi ,Non-equi ,outer ,self join                                      |
| • | 2.8 Views Creating, updating, Dropping Views.  |
| 2 | 2.9 Key Concepts-Super Key, Candidate Key, Primary Key, Foreign Key.                       |
|   | 2.10 Integrity Constraints- constraints on a single relation, not null constraint, unique  |
|   | constraint, check constraint, Primary key constraint, Foreign Key constraint.              |
|   | 2.11 Authorization   |
|   |  |
|   | 2.12 Fundamental Relational Algebra Operations: Select, Project,                           |
|   | 2.13 Composition of Relational operations: Union ,Set Difference , Cartesian Product       |

|   | Database Design Using E-R Model  |
|   | 3.1 Data Modeling Using the E-R Model: Entity ,Entity Sets-Weak Strong Entity Set          |
|   | 3.2 Relationship sets, Attributes, Types of attribute, Mapping Cardinalities, Shortcomings |
|   | of ER Model.   |
| 3 | 3.3 Enhanced ER (EER) model: Subclass, super class, Specialization and Generalization      |
| 5 |  |
|   | 3.4 Case studies: Bank, library, education, organization, hotel management, hospital       |
|   | management.  |
|   | Course Outcome: CO3Teaching Hours :5hrs Marks: 06(R- 2, U-4, A-)                           |
|   | Normalization  |
|   | 4.1 Normalization, Data redundancy and updating anomalies                                  |
| 4 | 4.2 Normalization based on Functional dependencies and Multi-valued Dependencies.          |
|   | 4.3 Normal Forms : 1NF, 2NF, 3NF, BCNF   |
|   |  |
|   | Course Outcome: CO4 Teaching Hours :6 hrs Marks: 10(R- 4, U-4, A-2)                        |
|   | Transaction Processing   |
|   | 5.1 Transaction concept: Transaction properties(ACID), Transaction states                  |
| 5 | 5.2 Concurrent Execution of Transactions.  |
| U | 5.3 Schedule : Serial ,Concurrent ,Cascade less Schedule .                                 |
|   | 5.4 Lock based protocols- Locks, Granting of locks, Lock Based Protocol,                   |

|   | PL/SQL Programming   |
|   | 6.1 Introduction of PL/SQL, Advantages of PL/SQL, The PL/SQL Block                         |
| 6 | Structure, PL/SQL execution environment, PL/SQL data                                       |
| ~ | types, Variables, Constants.   |
|   | 6.2 Control Structure: Conditional Control, IterativeControl, Sequential Control.          |
|   | 6.3 Exception Handling : Predefined Exception, User Defined Exception.                     |

| 6.4 Cursor:Implicit and Explicit Cursors,Declaring,Opening and Closing a   |     |
|--|-----|
| Cursor, Fetching a record from Cursor, Cursor for loops, parameterized     |     |
| Cursor.  |     |
| 6.5 Functions: Advantage, Creating ,Executing and Deleting a Functions.    |     |
| 6.6 Stored Procedures: Advantage, Creating ,Executing and Deleting a Store | ed  |
| Procedures.  |     |
| 6.7 Database Triggers: Use Of Database Triggers, How to apply database     |     |
| Triggers, Types of Triggers, Syntax for creating Trigger, Deleting Trigg   | er. |
|  |     |
| Course Outcome: CO6 Teaching Hours :8 hrs Marks: 10(R-4, U-4, A-2)         |     |
