Rationale:

Software Testing is the process of verifying a system with the purpose of identifying any errors, gaps or missing requirement versus the actual requirement. Software Testing is important because software bugs could be expensive or even dangerous. Learning this subject will help students to plan effective test approach and to find bugs in earlier phase of Software Development.

In addition, this subject will introduce Automation testing which will utilize student's creativity to explore new ways to test a system, and thus student will spend less time as a tester and more time being the Quality Analyst.

Course Outcomes: Student should be able to

CO1	Learn various types and levels of Software Testing.
CO2	Prepare various test cases for different types and levels of testing.
CO3	Prepare test plan for any application.
CO4	Identify bugs to create defects report to given application
CO5	Test software for performance measures using automated testing tools.
