### Rationale:

Engineering Manufacturing industry uses conventional machining processes on large scale. Technicians/ supervisors are required to possess knowledge and skills regarding selection of tooling & their geometry, selection of machining parameters, design or use of jigs, fixtures and press tools. The accuracy and economy of machining depends on the application of appropriate machining strategies.

In this context, the mechanical engineering diploma student must be well versed with tool materials, tool geometry, coolants, principles of jig/ fixtures design, press tool design etc. Also the student can find out specialized career option in the field of tool engineering.

Hence it is apt to study this course with the objective to develop the competency of selection of appropriate tooling.

**Course Outcomes:** Student should be able to

|     |   |
|-----|---|
| CO1 | Select appropriate tool materials and cutting fluids  |
| CO2 | Apply basics of theory of metal cutting for given conditions  |
| CO3 | Choose proper tool geometry for single point cutting tools, twist drills, reamers and milling cutters |
| CO4 | Design and use press tools for various operations   |
| CO5 | Develop and use the jigs and fixtures for given components  |
| CO6 | Develop basic features of forging die for given simple component                                      |

### Course Content Details:

| Unit No | Topics / Sub-topics   |
|---------|---|
| 1       | <p><b>Tool Materials &amp; Cutting Fluids</b></p> <p>1.1 Need to develop newer tool materials, Desired properties of tool materials, Tool materials, their composition, and applications- HSS, Cemented Carbides, Coated carbides, Cast alloy tools, Ceramics, Cermets, CBN, Diamond</p> <p>1.2 Heat zones in metal cutting, Desired properties of cutting fluids, Functions of cutting fluids, Types of cutting fluids, Factors considered in selection of cutting fluids, Cutting fluid maintenance, Methods of applications of coolants, mist as coolant, MQL, Dry machining Environmental issues with cutting fluids</p> <p><b>Course Outcome: CO1      Teaching Hours: 06      Marks:10(R-2, U-4, A-4)</b></p> |

| Unit No | Topics / Sub-topics   |
|---------|---|
| 2       | <p><b>Theory of Metal Cutting</b></p> <p>2.1 Parameters: Speed, feed, depth of cut, Types of chips and factors responsible for formation, Concepts of Orthogonal &amp; Oblique cutting, Chip thickness ratio, determination of shear angle, shear stress, Graphical determination of velocities in orthogonal cutting,</p> <p>2.2 Forces in orthogonal cutting, Merchant's Circle construction and graphical estimation of various forces, angle of friction</p> <p>2.3 Tool wear, types of tool wear, Tool life definition, Taylor's Equation of tool life, factors affecting tool life/ tool wear</p> <p>2.4 Machinability: Definition, factors affecting machinability, Machinability Index, Surface finish &amp; accuracy possible with various machining processes</p> <p><b>Course Outcome: CO2                      Teaching Hours:08                      Marks:10(R-2, U-4, A-4)</b></p>   |
| 3       | <p><b>Cutting Tool Geometry</b></p> <p>3.1 Tool geometry of single point cutting (SPC) tool, definitions and functions of various tool angles, Tool signature, Classification of SPC tools, Design of single point cutting tool, surface finish generated by SPC tool, Designation code of carbide inserts</p> <p>3.2 Milling Cutter: Elements and Tool geometry of plain milling cutter, up milling, down milling, specifications of milling cutters</p> <p>3.3 Twist Drills &amp; Reamers: Elements &amp; geometry of twist drill and reamer, specifications of drills &amp; reamers</p> <p>3.4 Various types of tool holders</p> <p><b>Course Outcome: CO3                      Teaching Hours:06                      Marks:10(R-2, U-4, A-4)</b></p>   |
| 4       | <p><b>Press Tool Design</b></p> <p>4.1 Sheet metal operations, Shearing, Clearance between die and punch, angular clearance, Calculation of blanking force and estimation of press capacity for blanking, Method of reducing punching force by providing shear on die and punch, Elements of press tools &amp; their functions, Types of press tools- Simple, Progressive, compound, combination, scrap stripe layout for blanking operation, percent utilization of stock, center of pressure</p> <p>4.2 Drawing, deep drawing, Estimation of drawing force, Percent reduction, Calculation of blank size, defects in drawing operation &amp; remedies</p> <p>4.3 Bending: Bending allowance, Spring back, Calculation of bending force</p> <p>4.4 Materials for manufacture of press tools components</p> <p>4.5 Safety in press operations, Maintenance &amp; repairs of dies,</p> <p><b>Course Outcome: CO4                      Teaching Hours:10                      Marks:10(R-2, U-4, A-4)</b></p> |
| 5       | <p><b>Jigs &amp; Fixtures Design</b></p> <p>5.1 Definition of Jig, fixture, Need and advantages, Parts of jigs/ fixtures, Considerations in Jig/ fixture design, Principles of Location, Locating elements, tolerance on locating elements, Use of diamond pin locator, Principles of clamping, clamping elements, Indexing elements, Fool proofing of jigs and fixtures</p> <p>5.2 Drill Jig types, Types of bushes, Development of jig for given component operation, clearances on bush,</p> <p>5.3 Types of fixtures, Development of fixture for given component operation</p> <p>5.4 Introduction to Jigs/ fixtures for Aerospace industry, fluidized bed fixtures, modular fixtures</p> <p>5.5 History cards for all types of cutting tools, dies and J &amp; F for maintenance &amp; regrinds</p> <p><b>Course Outcome:CO5                      Teaching Hours:10                      Marks:10(R-2, U-4, A-4)</b></p>   |

| Unit No | Topics / Sub-topics   |
|---------|---|
| 6       | <b>Forging Die Design</b><br>6.1 Types of forging, Advantages and limitations of forging, Applications<br>6.2 Types of forging dies, Constructional features of forging dies, materials for forging dies<br>6.3 Factors considered in design of forging dies<br>6.4 Types of Impressions in drop forging dies, Graphical method for developing edging impression<br>6.5 Development of simple forging die for drop forging and upset forging<br><b>Course Outcome:CO6</b> <b>Teaching Hours:05</b> <b>Marks:10(R-2, U-4, A-4)</b> |

### Suggested Specifications Table (Theory):

Level of questions: R: Remember, U: Understand, A: Apply

| Unit No      | Topic Title                     | Distribution of Theory Marks |           |           |             |
|--------------|---------------------------------|------------------------------|-----------|-----------|-------------|
|              |                                 | R Level                      | U Level   | A Level   | Total Marks |
| 1            | Tool Materials & Cutting Fluids | 2                            | 4         | 4         | 10          |
| 2            | Theory of Metal Cutting         | 2                            | 4         | 4         | 10          |
| 3            | Cutting Tool Geometry           | 2                            | 4         | 4         | 10          |
| 4            | Press Tool Design               | 2                            | 4         | 4         | 10          |
| 5            | Jigs & Fixtures Design          | 2                            | 4         | 4         | 10          |
| 6            | Forging Die Design              | 2                            | 4         | 4         | 10          |
| <b>Total</b> |                                 | <b>12</b>                    | <b>24</b> | <b>24</b> | <b>60</b>   |

### List of experiments/ Assignments:

| Sr. No. | Unit No | COs | Title of the Experiments/ Assignment   | Hours |
|---------|---------|-----|--|-------|
| 1       | 1       | CO1 | Determination of cutting fluid mixture composition and architecture of cutting fluid handling system of the machine tool | 2     |
| 2       | 2       | CO2 | Graphical estimation of forces & velocities in metal cutting   | 2     |
| 3       | 3       | CO3 | Design of Single Point Cutting Tool and SPC tool grinding  | 4     |
| 4       | 4       | CO4 | Development of scrap stripe layout (Group Activity)  | 4     |
| 5       | 4       | CO4 | Design of simple blanking die (Press Tool) (Group Activity)  | 4     |
| 6       | 5       | CO5 | Development of Drilling Jig (Group Activity)   | 4     |
| 7       | 5       | CO5 | Development of Fixture (Group Activity)  | 4     |
| 8       | 6       | CO6 | Development of drop/ upset forging die for given component (Group Activity)  | 4     |
| 9       | 4       | CO4 | Evaluation of drawability of sheet metal by Erichsen Cupping test  | 2     |

| Sr. No.      | Unit No | COs | Title of the Experiments/ Assignment   | Hours     |
|--------------|---------|-----|--|-----------|
| 10           | 4       | CO4 | Design of Drawing Die (Group Activity) | 2         |
| <b>Total</b> |         |     |  | <b>30</b> |

**Note:** For group activities, size of group should be 3-4 students. Experiments No. 1 to 8 are compulsory, Minimum 09 experiments/ assignments shall be completed. Remaining experiments are to be performed as per importance of the topic/ availability of time. Teacher may arrange the industry visit/ expert lecture as instructional strategy.

### Rationale:

Engineering industry uses variety of manufacturing processes. and processing different engineering materials, metals as well as non-metals. Mechanical engineering technicians require knowing the different types of measuring instrument to be used in variety of situation. While working in different domains of mechanical engineering, technicians shall possess the competence to select appropriate measuring instruments and quality control tools for required applications productively.

In this context, the mechanical engineering diploma student must be well versed with different types of measuring instrument to be used in variety of situations. Also the student is required to have hands on learning experience on different types of measuring instruments.

In the present global competitive scenario, an industry can only survive and flourish when its customers are satisfied. This satisfaction comes with quality product and services. This course imparts necessary knowledge so that students can perform the job of quality control supervisor effectively.

Hence it is apt to study this course with the objective to develop the competency of selection, use and applications of measuring instruments and various quality control tools.

### Course Outcomes: Student should be able to

|     |  |
|-----|--|
| CO1 | Describe the terminology related with metrology and calibration requirements   |
| CO2 | Select and use of suitable measuring instruments for linear measurement and describe construction, working and applications of comparators.                                  |
| CO3 | Use instruments for angle measurement and thread measurement.  |
| CO4 | Interpret tolerances, fits and design Go-No Go gauges from given data and perform machine tool alignment testing   |
| CO5 | Select and use of suitable measuring instruments for surface roughness and flatness  |
| CO6 | Describe the elements of Quality management, TQM, Six Sigma and apply the technique of statistical quality control, acceptance sampling and estimation of process capability |

**Course Content Details:**

| Unit No | Topics / Sub-topics   |
|---------|---|
| 1       | <p><b>Basics of Engineering Metrology</b></p> <p>1.1 Disciplines of Metrology: Scientific metrology, industrial metrology and Legal Metrology, Measuring characteristics of instruments &amp; their significance: Least count, range, precision, accuracy, repeatability, sensitivity</p> <p>1.2 Traceability and calibration: Need of Calibration, General requirements for the competence of testing and calibration laboratories (as per ISO 17025 - 2017 and NABL-129 related with dimensional metrology, Types and Sources of errors in measurement, concept of uncertainty</p> <p>1.3 Types of standards: Line standard, End standard and wavelength standard, their comparison.</p> <p><b>Course Outcome: CO1                      Teaching Hours: 06                      Marks: 10 (R-2, U-4, A-4)</b></p> |
| 2       | <p><b>Linear measurement and Comparators</b></p> <p>2.1 Basic Measuring Instruments: Principle, construction and application/operation of Vernier calipers, Micrometer, Height gauge, Feeler gauges, Radius gauges, Screw pitch gauges, Slip gauges: specification, wringing and combination, Applications of slip gauges</p> <p>2.2 Definition and Classification of comparators, requirements of good comparator</p> <p>2.3 Working and applications of comparators: Dial indicator, Sigma comparator, Pneumatic Comparator</p> <p><b>Course Outcome: CO2                      Teaching Hours: 06                      Marks: 10 (R-2, U-4, A-4)</b></p>  |
| 3       | <p><b>Angular Measurement and Thread Measurement</b></p> <p>3.1 Concept of angle measurements, Working and use of universal bevel Protractor, Sine Bar, Sine Centre, Sine table and Spirit Level</p> <p>3.2 Principle and Working of Clinometers, Angle dekkor, Angle Gauges: combination for setting required angle</p> <p>3.3 Definitions and measurement of different thread elements such as major diameter, minor diameter, effective diameter, pitch for external threads</p> <p>3.4 Construction, working and use of Thread Micrometer, floating carriage micrometer, Errors in threads, Pitch errors</p> <p><b>Course Outcome: CO3                      Teaching Hours:07                      Marks:10 (R-2, U-4, A-4)</b></p>   |
| 4       | <p><b>Gauge Design and Machine Tool Testing</b></p> <p>4.1 Concept of Limits, Fits, And Tolerances, interchangeability, Hole and Shaft Basis System (IS-919-1993), Tolerance staking: worst scenario method and SD method</p> <p>4.2 Classification of gauges, Taylor's Principle for gauge design, Design of Go-No Go Gauges from given data</p> <p>4.3 Concept of Parallelism, Straightness, Squareness, Roundness, Run out</p> <p>4.4 Alignment Test: Significance of alignment tests, Tools required, Procedure of alignment tests for Lathe, milling machine and drilling machine as per IS standard</p> <p><b>Course Outcome: CO4                      Teaching Hours:07                      Marks: 10 (R-2, U-4, A-</b></p>   |

| Unit No | Topics / Sub-topics   |
|---------|---|
|         | 4)  |
| 5       | <p><b>Surface Roughness, Flatness Testing and Modern Metrology</b></p> <p>5.1 Terminology as per IS 3073- 1967, , CLA, Ra, RMS values and their interpretation,<br/>           5.2 Various techniques of qualitative analysis<br/>           5.3 Talysurf roughness tester: construction and working<br/>           5.4 Principles of interferometry, Use of Optical flat for flatness testing<br/>           5.5 Introduction to laser metrology<br/>           5.6 Coordinate measuring machines (CMM): Construction, working and industrial applications.</p> <p><b>Course Outcome: CO5                      Teaching Hours:05                      Marks: 10 (R-2, U-4,A-4)</b></p>   |
| 6       | <p><b>Quality Tools and Quality Management</b></p> <p>6.1 Definitions of quality and quality control, Quality characteristics, Quality of design, Quality of conformance, Quality of performance, Quality cost &amp; its components, Comparison between Quality assurance and Quality Control, Inspection: Need, Types of inspection. Inspection stages,<br/>           6.2 Principles and concept of 'Total Quantity Management', Quality Audit, and its type, Six sigma concept, Needs of quality standards, Introduction of ISO 9001 recent version, Revision of quality standards<br/>           6.3 <b>Statistical Quality Control:</b> Significance of SQC, Variables and attributes, Population and sample, Causes of variation assignable and random variations. Normal distribution curve.<br/>           6.4 Control charts: Plotting of Control charts for variables (X &amp; R charts), control charts for attributes (P, C charts), selection of appropriate type of chart, Process capability: estimation (Cp &amp; Cpk), interpretation: Statistically capable and in capable processes.<br/>           6.5 Acceptance Sampling: Concept of sampling inspection, Comparison with 100% inspection, Different types of sampling plans, IS 4905-1968, working of various sampling plans, factors affecting on selection of sampling plan, Operating Characteristic Curve. consumer's risk and producer's risk</p> <p><b>Course Outcome: CO6                      Teaching Hours:14                      Marks: 10 (R-2, U-4, A-4)</b></p> |

**Suggested Specifications Table (Theory):****Level of questions: R: Remember, U: Understand, A: Apply**

| Unit No      | Topic Title  | Distribution of Theory Marks |           |           |             |
|--------------|--|------------------------------|-----------|-----------|-------------|
|              |  | R Level                      | U Level   | A Level   | Total Marks |
| 1            | Basics of Engineering Metrology                          | 2                            | 4         | 4         | 10          |
| 2            | Linear measurement and Comparators                       | 2                            | 4         | 4         | 10          |
| 3            | Angular Measurement and Thread Measurement               | 2                            | 4         | 4         | 10          |
| 4            | Gauge Design and Machine Tool Testing                    | 2                            | 4         | 4         | 10          |
| 5            | Surface Roughness, Flatness Testing and Modern Metrology | 2                            | 4         | 4         | 10          |

**List of experiments:**

| Sr. No. | Unit No | COs      | Title of the Assignments/Experiments   | Hours |
|---------|---------|----------|--|-------|
| 1       | -       | -        | Know your laboratory ( Safety, care and maintenance)   | 2     |
| 2       | 1,2     | CO1, CO2 | Calibration Procedure for Vernier Caliper and Micrometer   | 2     |
| 3       | 2       | CO2      | Use of basic measuring instruments: Surface plate, V-block, feeler gauge, radius gauge, thread gauge and height gauge                | 2     |
| 4       | 2       | CO2      | Inspection of components using Pneumatic comparator  | 2     |
| 5       | 2       | CO2      | Use of dial indicator as mechanical comparator   | 2     |
| 6       | 3       | CO3      | Angle measurement using Sine bar   | 2     |
| 7       | 3       | CO3      | To measure major diameter, minor diameter, effective diameter, using floating carriage diameter measuring machine/thread micrometer. | 2     |
| 8       | 3       | CO3      | To measure major diameter, minor diameter, pith, depth of thread and thread angle using profile projector/ Tool Maker's Microscope   | 2     |
| 9       | 4       | CO4      | Assignment on Gauge Design   | 2     |
| 10      | 4       | CO4      | Alignment testing on center lathe / drilling machine   | 2     |
| 11      | 5       | CO5      | Surface flatness characterization using optical flats  | 2     |
| 12      | 6       | CO6      | Construct X,R chart and interpret the results/ Plotting of control chart for variables   | 2     |
| 13      | 6       | CO6      | Construct P/C- chart and interpret the results/ Plotting of control chart for attributes   | 2     |

|              |   |     |                     |           |
|--------------|---|-----|---------------------|-----------|
| 14           | 6 | CO6 | Sampling Inspection | 2         |
| <b>Total</b> |   |     |                     | <b>30</b> |

**Note: Any 11 experiments covering all COs**

Abbreviations: L- Theory Lecture, P-Practical, TU-Tutorial, TH- Theory Paper TS1 & TS2- Term Tests, PR-Practical, OR-Oral, TW: Term Work (progressive assessment) , \* Indicates assessment by External Examiner else internal practical skill test , # indicates Self, on- line learning Mode, @ indicates on line examination

Note: For Minimum passing marks under various heads, refer, examination rule AR26. Two practical skill tests are to be conducted. First skill test at midterm and second skill test at the end of the term.

#### **Rational:**

In Recent years, the manufacturing environment has undergone dramatic changes. For achieving market of goals, it is essential to produce quality parts in less time. Intervention of information technology in manufacturing has great impact on manufacturing techniques. The strategic requirements such as minimum lead time and high quality cannot be met without the adaption of computerized numerical control (CNC) technology. CNC machines normally are not limited to machine tools only but realm of CNC has widened in almost all areas of manufacturing processes and support activities. It is therefore very important for Mechanical diploma engineer's to master CNC technology.

In this course learner can develop skills required for programming, selection of tooling etc for CNC machine.

**Course Outcomes:** At the end of the course student will be able to:

|      |  |
|------|--|
| CO1  | Identity different axes, machine zero, home position, systems and controls CNC machines  |
| CO2  | Select, mount and set cutting tools and tool holders on CNC.   |
| CO3  | Prepare part programming using ISO format for given simple components with and without use of MACRO, CANNED CYCLE and SUBROUTINE using ISO format. |
| CO4  | Describe working principle Automatic Tool Changing device  |
| CO5  | Apply maintenance practices for CNC machines.  |
| CO 6 | Describe the different components of automated system.   |

**Course Content Details:**

### Rationale:

Hydraulic and pneumatic operated machines and equipment are widely used in various industries due to its versatility adaptability to automation. Mechanical engineering technologists are required to maintain such systems in different segments of industries. This competency needs the knowledge of construction and working of different components of hydraulic and pneumatic systems.

This course will give the students the basic skills and knowledge to use and maintain different types hydraulic systems and pneumatic systems.

**Course Outcomes:** Student should be able to

|     |  |
|-----|--|
| CO1 | Identify various components of hydraulic and pneumatic systems.      |
| CO2 | Select pump and other accessories for oil operated system.           |
| CO3 | Select control valves and actuators for given fluid operated system. |
| CO4 | Select compressor and other component for air operated system.       |
| CO5 | Develop different hydraulic circuits for given application           |
| CO6 | Develop different pneumatic circuits for given application           |

### Course Content Details:

| Unit No | Topics / Sub-topics   |
|---------|---|
| 1       | <p><b>Introduction to Hydraulic and Pneumatic systems</b></p> <p>1.1. General layout of Oil Hydraulic system.<br/>           1.2. Practical applications of Hydraulic system.<br/>           1.3. Merits and limitations of Hydraulic system.<br/>           1.4. ISO symbols used in Hydraulic system.<br/>           1.5. General layout of Pneumatic system.<br/>           1.6. Practical applications of Pneumatic system.<br/>           1.7. Merits and limitations of Pneumatic system.<br/>           1.8. ISO symbols used in Pneumatic system.</p> <p><b>Course Outcome: CO1                      Teaching Hrs:04                      Marks: 08 (R-2, U-4, A-2)</b></p> |

|   |   |
|---|---|
| 2 | <p><b>Pumps and Accessories in Hydraulic system</b></p> <p>2.1. Pump: Classification of Pump, Construction and working of Gear pump, Vane pump, Screw pump, Piston pump</p> <p>2.2. Accessories: Oil reservoir, pipes, hoses, fittings, oil filters, seals and gaskets, accumulators, heat exchangers</p> <p>2.3. Types of hydraulic oils used in hydraulic systems and their specifications</p> <p><b>Course Outcome: CO2                      Teaching Hrs:06                      Marks: 10 (R-4, U-4, A-2)</b></p>  |
| 3 | <p><b>Control Valves and Actuators</b></p> <p>3.1. Classification of Control Valves</p> <p>3.2. Pressure Control Valves: Construction and working of Pressure relief valve, Pressure reducing valve, Unloading valve.</p> <p>3.3. Direction Control Valve: Check valve, 2/2, 3/2, 4/2, 4/3, 5/2, 5/3 DC valve used in Hydraulics and Pneumatics system.</p> <p>3.4. Flow Control Valves: Variable flow control valve Pressure compensated, Non compensated flow control valve,</p> <p>3.5. Classification of Hydraulic and Pneumatic actuators, Construction and working of Linear and Rotary actuators</p> <p><b>Course Outcome: CO3                      Teaching Hrs:10                      Marks: 10 (R-4, U-4, A-2)</b></p> |
| 4 | <p><b>Compressor and Pneumatic Components</b></p> <p>4.1. Types, Construction, working principle of Reciprocating and Rotary compressor</p> <p>4.2. Construction, working principle of FRL unit, Dual (Twin) pressure valve, Shuttle valve, Quick exhaust valve, Time delay valve</p> <p><b>Course Outcome: CO4                      Teaching Hrs: 08                      Marks:10 (R-4, U-4, A-2)</b></p>   |
| 5 | <p><b>Oil Hydraulic Circuits</b></p> <p>5.1. Simple oil Hydraulic circuits- Single and Double acting hydraulic cylinders, motors</p> <p>5.2. Speed control- Meter in, Meter out, Bleed off circuit.</p> <p>5.3. Regenerative, Synchronizing, Sequencing circuits.</p> <p>5.4. Hydraulic circuit for Milling machine, Shaper machine, Grinding machine</p> <p>5.5. Remedies and fault detection in Hydraulic circuits</p> <p><b>Course Outcome: CO5                      Teaching Hrs: 09                      Marks: 12 (R-2, U-4, A-6)</b></p>   |
| 6 | <p><b>Pneumatic Circuits</b></p> <p>6.1. Direct and indirect control of Single Acting and Double Acting air cylinders, Motors</p> <p>6.2. Speed control circuit for cylinders and motors</p> <p>6.3. Sequencing circuits</p> <p>6.4. Remedies and fault detection in Pneumatic circuits</p> <p><b>Course Outcome: CO6                      Teaching Hrs: 08                      Marks: 10 (R-2, U-2, A-6)</b></p>  |

### Rationale:

Design of Machine Elements is an applied technology subject. This course needs essential fundamental knowledge of Applied Mechanics, Strength of Materials, Engineering Materials, Machine Drawing and Theory of Machines. A diploma holder in mechanical discipline is expected to design and draw simple machine components used in industries.

This course aims for developing analytical abilities to give solutions to engineering design problems.

**Course Outcomes:** Student should be able to-

|     |   |
|-----|---|
| CO1 | Define basic concepts in design, Factor of safety and Theories of failures. |
| CO2 | Prepare design for eccentric loading, joints, levers and offset links       |
| CO3 | Design keys, shafts and couplings   |
| CO4 | Design of bolts for brackets and welded joints                              |
| CO5 | Design power screws   |
| CO6 | Design of helical springs.  |

### Course Content Details:

| Unit No | Topics / Sub-topics  |
|---------|--|
| 1       | <p><b>Introduction to Design of Machine Elements</b></p> <p><b>1.1. Basic Design Considerations:</b> Design philosophy and Procedures, General Considerations in design, Types of loads, concepts of stress ,strain, Stress – Strain Diagram for Ductile and Brittle Materials, True Stress-Strain and Engineering stress strain diagram , Types of Stresses such as Tension, Compression, Shear, Bending, Crushing and Bearing pressure, Concept of Creep, Fatigue, S-N curve, Endurance Limit</p> <p><b>1.2. Factors of Safety and Material Designation:</b> Factor of Safety and Factors affecting its selection, Stress Concentration – Causes &amp; Remedies, Converting actual load or torque into design load/torque using design factors, Designation of materials as per IS and</p> |

| Unit No | Topics / Sub-topics  |
|---------|--|
|         | <p>introduction to International standards, advantages of standardization, use of design data book and use of standards in design</p> <p><b>1.3. Variable stresses:</b> Fluctuating stresses, fatigue, fatigue failure,, S-N curve, Endurance limit, stress concentration and its remedies</p> <p><b>1.4. Theories of Elastic Failures:</b> Principal normal stress theory, Maximum shear stress theory &amp; maximum distortion energy theory</p> <p><b>1.5.</b> Modern design considerations, Ergonomic and Aesthetic consideration and concept of product design</p> <p><b>Course Outcome: CO1                      Teaching Hours: 08                      Marks: 10 (R-2, U-4, A-4)</b></p> |
| 2       | <p><b>Design of Joints and Offset links</b></p> <p><b>2.1.</b> Design of Cotter Joint, Knuckle Joint and Design of bell crank lever</p> <p><b>2.2.</b> Design of Off-set links, C – Clamp, Overhang Crank</p> <p><b>Course Outcome: CO2                      Teaching Hours:07                      Marks: 10 (R-0, U-4, A-6)</b></p>  |
| 3       | <p><b>Design of Shafts, Keys and Couplings</b></p> <p><b>3.1. Design of Keys and Shaft:</b> Design of Rectangular, parallel sunk keys, Effect of Keyways on strength of shaft. Types of Shafts, Shaft materials, Standard Sizes, Design of shafts (Hollow and Solid) using strength and rigidity criteria, ASME code of design for line shafts supported between bearings with one or two pulleys in between or one overhung pulley.</p> <p><b>3.2. Design of Couplings:</b> Protected type Flanged coupling and Bush-pin type flexible coupling.</p> <p><b>Course Outcome: CO3                      Teaching Hours: 08                      Marks: 10 (R-4, U-0, A-6)</b></p>                   |
| 4       | <p><b>Design of threaded and welded joints</b></p> <p><b>4.1.</b> Stresses in Screwed fasteners, bolts of Uniform Strength.</p> <p><b>4.2.</b> Design of Bolted Joints for brackets when the load is parallel and perpendicular to the axis of the bolt considering axial and eccentric loading</p> <p><b>4.3.</b> Design of parallel and transverse fillet welds, axially loaded symmetrical sections. ASME codes for welded joints</p> <p><b>Course Outcome: CO4                      Teaching Hours: 07                      Marks: 10 (R-2, U-4, A-4)</b></p>  |
| 5       | <p><b>Design of Power Screws</b></p> <p><b>5.1. Basic concepts:</b> Thread Profiles used for power Screws, relative merits and demerits of each, Self-locking and overhauling property, Torque required to overcome thread friction, efficiency of power screws, types of stresses induced.</p> <p><b>5.2.</b> Design of Screw Jack.</p> <p><b>Course Outcome: CO5                      Teaching Hours: 07                      Marks: 10 (R-4, U-0, A-6 )</b></p>   |
| 6       | <p><b>Design of springs</b></p> <p><b>6.1.</b> Classification and Applications of Springs, Spring - terminology, materials specifications. Stresses in springs, Wahl's correction factor, Deflection of springs, Energy stored in springs, construction and application of Leaf spring.</p>  |

| Unit No  | Topics / Sub-topics   |
|--|---|
|  | <p><b>6.2.</b> Design of Helical tension and compression springs subjected to uniform applied loads like I.C. engine valves, weighing balance, railway buffers and governor springs.</p> <p><b>6.3.</b> Design of leaf spring without considering prestressing for the leaves</p> |
| <p><b>Course Outcome: CO6      Teaching Hours: 08      Marks: 10 (R-4, U-0, A-6)</b></p> |   |

### Suggested Specifications Table (Theory):

Level of questions: **R: Remember, U: Understand, A: Apply**

| Unit No      | Topic Title  | Distribution of Theory Marks |           |           |             |
|--------------|--|------------------------------|-----------|-----------|-------------|
|              |  | R Level                      | U Level   | A Level   | Total Marks |
| 1            | Introduction to Design   | 02                           | 04        | 04        | 10          |
| 2            | Design of Joints, Levers and Offset links                      | --                           | 04        | 06        | 10          |
| 3            | Design of Shafts, Keys and Couplings                           | 04                           | --        | 06        | 10          |
| 4            | Design of threaded, welded joints and Introduction to Bearings | 02                           | 04        | 04        | 10          |
| 5            | Design of Power Screws   | 04                           | --        | 06        | 10          |
| 6            | Design of Springs  | 04                           | --        | 06        | 10          |
| <b>Total</b> |  | <b>16</b>                    | <b>12</b> | <b>32</b> | <b>60</b>   |

### List of experiments:

| Sr. No. | Unit No | COs | Title of the Experiments  | Hours |
|---------|---------|-----|---|-------|
| 1       | 1       | CO1 | Assignment based on Fundamental Design Concepts   | 02    |
| 2       | 2       | CO2 | <b>Design of Knuckle/Cotter Joint/ Levers:</b> Observe the system where transmission of reciprocating forces or static compression/tensile load takes place through the links of a mechanism. Get the required information regarding load transmitted. By selecting suitable materials from design data book, design the Knuckle/ Cotter/Turn Buckle/Levers. Prepare design report, details and assembly drawing indicating overall dimensions, tolerances, fits and surface finish. Also prepare bill of materials. (Activity should be completed in a group of maximum four students)                   | 06    |
| 3       | 3       | CO3 | <b>Design of Protected Type Rigid Flange/ Bushed Pin Type Flexible Coupling:</b> Observe the system where transmission of power takes place through shaft, Keys, coupling, pulley and belt drive. Get the required information regarding power transmitted (power output by motor or engine etc.). By selecting suitable materials from design data book, design the coupling. Prepare design report, details and assembly drawing indicating overall dimensions, tolerances, fits and surface finish. Also prepare bill of materials. (Activity should be completed in a group of maximum four students) | 06    |
| 4       | 3       | CO3 | <b>Design of Stepped Solid/Hollow Shaft:</b> Observe the system where transmission of power takes place through shaft, Keys, coupling, pulley and belt drive. Get the required information regarding power transmitted (power output by motor or engine etc.). By selecting suitable materials  | 04    |

| Sr. No.      | Unit No | COs        | Title of the Experiments   | Hours     |
|--------------|---------|------------|--|-----------|
|              |         |            | from design data book, design the Stepped solid/hollow shaft subjected to combined bending and torsional stresses. Prepare design report, indicating overall dimensions, tolerances, fits and surface finish. (Activity should be completed in a group of maximum four students)   |           |
| 5            | 5       | CO5        | <b>Design of Screw Jack:</b> Observe the System where transmission of power takes place through power Screws. (e.g. Lead screw of lathe, feed screws of machine tools, Clamping screws, Screw Jack.). Get the required information regarding effort, clamping force, etc., and selecting suitable materials from data book design screw, nut and different simple components in assembly. Prepare design report, details and assembly drawing indicating overall dimensions, tolerances, fits and surface finish. Also prepare bill of materials. (Activity should be completed in a group of maximum four students) | 06        |
| 6            | 2/5     | CO2<br>CO5 | Prepare CAD Drawing for Practical No 2 or 5 in practical and print out of sheet should be attached.  | 02        |
| 7            | 4       | CO4        | Assignment based on design of welded joints and bolts.   | 02        |
| 8            | 6       | CO6        | Assignment on design of helical springs  | 02        |
| <b>Total</b> |         |            |  | <b>30</b> |

**Note: All the design sheets and assignments are compulsory.**

### Rationale:

Manufacturing industries have to design, develop, and manufacture the products in minimum possible time, at economical rate, and mainly without negotiating on the quality aspects, to sustain in competitive market. Hence, design and production department has to work together in an integrated approach. An application of computer in design, development, and manufacturing has created the way for highly flexible, accurate and fast integrated approach in manufacturing the parts. The process begins with conceptualizing the machine components and assemblies in automobiles, machine tools, and earth movers etc. as 3D models, making application of solid modeling software as a need of time in industries. In this context, the mechanical engineering diploma student must be well conversant with use of different features of solid modeling software. Students are also required to know the fundamentals of computer aided manufacturing. This course deals with the concept of solid modeling to enhance the solid modeling skills of the diploma engineering students. This course will enable the students to inculcate solid modeling concepts to solve engineering problems.

**Course Outcomes:** Student should be able to

|     |   |
|-----|---|
| CO1 | Create and Constraint 2D sketches                             |
| CO2 | Generate 3D models of machine components                      |
| CO3 | Prepare assembly of 3D modelled components.                   |
| CO4 | Create 3D surface models                                      |
| CO5 | Generate orthographic views/ drawings of models / assemblies. |
| CO6 | Simulate tool path and create NC files                        |

**Course Content Details:**

| <b>Unit No</b> | <b>Topics / Sub-topics</b>  |
|----------------|---|
| 1              | <p><b>Introduction &amp; 2D Sketching</b></p> <p>1.1 Introduction, Need of solid modeling, Different software's for Solid Modeling, Applications, Benefits.</p> <p>1.2 Getting familiar with User Interface, Navigation tools, Drawing Units</p> <p>1.3 Print setup, Layout preparation,</p> <p>1.4 Making basic sketches- rectangle, circle etc., making polygons, circular/rectangular sketch patterns,</p> <p>1.5 Modifying 2D sketches using trim, extend, offset etc. Geometrical constraints,</p> <p>1.6 Export the drawing in dxf/ dwg,/ svg,/ pdf formats , and Print /Plot the drawings</p> <p><b>Course outcome : CO1</b></p> |
| 2              | <p><b>3D Modeling</b></p> <p>2.1 3D modeling using extrude, revolve, sweep, etc.</p> <p>2.2 Modifying 3D models by fillet, chamfer, use of rectangular and circular patterns, move, copy etc. Boolean operation : union, subtract, intersection</p> <p>2.3 Making construction /reference planes</p> <p>2.4 Modeling of simple machine components, such as spur gear, 3D spanner, nut bolts, pipe Joints, bearings, couplings, brackets, tools etc.</p> <p>2.5 Export model in IGES/ STEP/ STL/dxf/ dwg,/ svg,/ pdf formats, and Print /Plot the 3D models</p> <p><b>Course outcome : CO2</b></p>                                       |
| 3              | <p><b>Assembly Modeling</b></p> <p>3.1 3D Modeling of assembly components (Assembly should have minimum three components like screw jack, bearings, tails stock, pipe vice, tool holders, couplings, pipe joints etc.)</p> <p>3.2 Joints/constraints in Assembly,</p> <p>3.2 Assembly motion,</p> <p>3.3 Exploded view of assembly</p> <p>3.3 Export assembly in IGES/ STEP/ STL/dxf/ dwg,/ svg,/ pdf formats &amp; Print /Plot the Assembly</p> <p><b>Course outcome : CO3</b></p>   |
| 4              | <p><b>Surface Modeling</b></p> <p>4.1 Introduction, Creating free form surfaces</p> <p>4.2 Creating free form surface models like water bottle, flower pot, heating iron, detergent bottle, soap case etc.</p> <p>4.3 Export model IGES/ STEP/ STL/dxf/ dwg,/ svg,/ pdf formats, and Print /Plot the surface model.</p> <p><b>Course outcome : CO4</b></p>  |
| 5              | <p><b>Drafting</b></p> <p>6.1 Generate 2D drawings from 3D models</p> <p>6.2 Insert base view, projected views - front view, top view, side view, sectional views, isometric views, etc.</p> <p>6.3 Drafting of Assemblies</p> <p>6.4 Dimensioning,</p> <p>6.5 Bill of material for assemblies</p>  |

|   |   |
|---|---|
|   | 6.6 Export drawing in IGES/ STEP/ STL/dxf/ dwg./ svg./ pdf formats, and Print /Plot the drawing of model/ assemblies<br><b>Course outcome : CO5</b>   |
| 6 | <b>Introduction to CAM</b><br>7.1 Setup, Tool Manager, Drilling tool path, 2D tool path, simulate, setup sheets, post NC files<br>7.2 3D Printing, export to STL<br>7.3 Print /Plot the tool path and NC files<br><b>Course outcome : CO6</b> |

**List of experiments:**

| Sr. No. | Unit No | COs | Title of the Experiments   | Hours |
|---------|---------|-----|--|-------|
|         |         |     | Lab Orientation & Safety Instructions  | 02    |
| 1       | 1       | CO1 | Introduction to Graphics User Interface, Demonstrate the use of navigating tools, sketching of 2D sketches and constraints. <b>Prepare minimum four 2D sketches and printing/ plotting the drawings.</b>                                 | 08    |
| 2       | 2       | CO2 | Demonstrate to prepare 3D models from 2D sketches involving use of extrude, revolve, sweep, etc. commands, and modify commands. <b>Prepare minimum four 3D Models of machine components and printing / plotting the models.</b>          | 10    |
| 3       | 3       | CO3 | Demonstration of assembling the 3D models, establishing the motion in components of assembly. <b>Prepare an assembly from 3D modelled components, establish motion in assembly components, and printing/plotting an assembly.</b>        | 06    |
| 4       | 3       | CO3 | Demonstration of creating exploded view of an assembly. <b>Prepare exploded view of an assembly from prepared assembly and printing/plotting exploded view of an assembly.</b>   | 04    |
| 5       | 4       | CO4 | Demonstration of creating free form surfaces such as water bottle, flower pot, heating iron, detergent bottle, soap case, table lamp etc. <b>Prepare minimum four freeform surface models and printing / plotting the surface model.</b> | 08    |
| 6       | 5       | CO5 | Demonstration of creating drafting i.e. base view, projected views, sectional views, isometric views of models. <b>Prepare the drafting of minimum four 3D models and printing / plotting the different views of 3D model.</b>           | 04    |

| Sr. No.      | Unit No | COs | Title of the Experiments  | Hours     |
|--------------|---------|-----|---|-----------|
| 7            | 5       | CO5 | Demonstration of creating drafting i.e. base view, projected views, sectional views, isometric views of assembly, and bill of materials.<br><b>Prepare the drafting of minimum one assembly, bill of material (BoM), and printing / plotting the different views of assembly.</b> | 06        |
| 8            | 6       | Co6 | Demonstration for Computer Aided Manufacturing for machining of the given component.<br><b>Select the tool, and simulate tool path for machining of the modelled component, and print / plot the tool path.</b>   | 08        |
| 9            | 6       | CO6 | Demonstration for Computer Aided Manufacturing for machining of the given component.<br><b>Generate the G codes for machining of the given component and print / plot the codes.</b>  | 04        |
| <b>Total</b> |         |     |   | <b>60</b> |

### Rationale:

Diploma technicians is expected to integrate and apply the theory and practical skills to solve the industrial issues. This requires the abilities for problem identification, definition and problem analysis, development of alternatives and implementation of solution. The comprehensive understanding of various courses studied and application of basics to derive solution need to be developed within technicians.

This course provides the opportunity for learners to solve the problem, using technical knowledge and skills gained during previous semesters. It also simulates the situation for team working, leading and self-motivation through work.

### Course Outcomes: Student should be able to

|     |   |
|-----|---|
| CO1 | Identify, Analyze and Define the problems.  |
| CO2 | Derive solutions to the problem and select most appropriate solution.             |
| CO3 | Use various information resources to collect information related to project idea. |
| CO4 | Manage conflicts and work effectively in team.                                    |
| CO5 | Design, Develop, and Manufacture the machine/equipment.                           |
| CO6 | Prepare project related documentation, communicate and present work done.         |

### Course Content Details:
